

The complete employee journey

Motee doesn't stop once you've hired someone. A recruitment record becomes an employee record, which then drives onboarding, assets, learning, performance, engagement and eventually offboarding — 8 connected stages, one roadmap.

Recommended version

EMPLOYEE LIFECYCLE

The complete employee journey

From workforce planning to offboarding, Motee connects every stage of the employee lifecycle — carrying information forward, triggering the right actions and creating one continuous employee journey.

THE EMPLOYEE CYCLE

One journey, eight connected stages

Nothing here is a dead end — every stage hands off cleanly into the next, so the record you start with is the one you finish with.

First, I would use “**Employee Lifecycle**” rather than “**Employee Cycle**.” “Employee Lifecycle” is the established HR term and is consistent with how you're positioning the Motee page.

My preferred version

THE EMPLOYEE LIFECYCLE

One journey. Eight connected stages.

From workforce planning to offboarding, every stage connects to the next — carrying information forward, triggering the right actions and creating one continuous employee journey.

 **Automated workflows**
Approvals and handoffs move on their own — nothing waits on a spreadsheet.

 **One source of truth**
Every stage reads and writes the same employee record, start to finish.

 **Built-in compliance**
Checks, documents and policy sign-off are part of the flow, not an afterthought.

 **Actionable insights**
Every stage feeds Analytics, so a bottleneck shows up before it costs you.

I would evolve the four messages toward:

One Connected Record — information follows the person through the lifecycle.

Automated Workflows — approvals and hand-offs trigger the next action.

Proactive Action Centre — Motee tells HR and managers what requires attention.

Compliance & Auditability — requirements, evidence, documents and actions are tracked.

 **Stage-by-stage detail**
264 items are moving through the pipeline. Click any stage to open its workflow.

My recommended wording

Lifecycle Overview

264 people and activities across the employee lifecycle. Select any stage to view its workflow, actions and progress.

STAGE 1 · *What workforce do we need, now and next?*

Workforce Planning

Headcount planning, skills-gap analysis and succession planning turn strategy into a position request.

6 in progress

Recommended version

STAGE 1 · WORKFORCE PLANNING

What people and skills do we need, now and next?

Workforce Planning

Turn business strategy into workforce needs through headcount planning, skills-gap analysis, succession planning and workforce forecasting.

6 activities in progress

I prefer “**6 activities in progress**” over simply “**6 in progress**” because the number becomes immediately understandable.

STAGE 2 · *We're authorised — start the process.*

Requisition

An approved position becomes a requisition: job description drafted, approved and published.

Recommended version

STAGE 2 · We're approved — ready to recruit.

Requisition

Turn an approved position into a recruitment-ready requisition, with the role details, job description and required approvals in place.

STAGE 3 · Reach and engage the right talent.

➤ **Attract**

The vacancy goes live, applications come in, and the field narrows to a shortlist.

6 open vacancies

Recommended version

STAGE 3 · How do we reach and engage the right talent?

Attract

Publish and promote the vacancy across the right channels to attract suitable candidates and build the applicant pipeline.

6 open vacancies

STAGE 4 · Assess and choose the best fit.

Select

Structured interviews and scorecards build a defensible record of why a candidate was chosen.

247 in pipeline

Recommended wording

STAGE 4 · Who is the best fit?

Select

Review, shortlist, interview and assess candidates using consistent criteria to make fair, evidence-based selection decisions.

247 candidates in selection

STAGE 5 · Make the offer, then confirm it.

Pre-employment

Offer, acceptance, references, guarantors and role-specific checks — rules-based, not one-size-fits-all.

Recommended version

STAGE 5 · Secure the hire and confirm they're ready to join.

Pre-employment

Make the offer, capture acceptance and complete the required references, checks and approvals before onboarding begins.

This is my preferred wording.

Because Motee also supports e-signature, I would make that visible in the detailed workflow:

Offer Generated → E-signature → Offer Accepted → References → Guarantor Checks (where applicable) → Role-specific Checks → Cleared → Ready to Onboard

Recommended version

STAGE 6 · Set them up for success from day one.

Onboard

Welcome the new starter, complete their employee setup, documents and induction, and make sure everything is ready for a successful start.

5 new starters onboarding

Recommended version

STAGE 7 · How do we help our people grow, perform and stay?

Develop, Perform & Retain

Support employees throughout their journey with continuous development, performance, recognition and engagement — helping people grow, succeed and stay.

Performance | Learning & Development | Career & Succession | Engagement

I would consider adding Career & Succession if that functionality exists, because career progression is an important part of retention.

One change to the capability buttons

I question whether Assets belongs as one of the four headline capabilities for Stage 7.

An asset allocated during onboarding shouldn't have to be entered again during offboarding. When the employee leaves, Motee should already know

Assets should still be connected to the employee throughout employment, but I would move Assets to our “Services Supporting Everything” layer, where you've already positioned it.

STAGE 8 · *Manage the transition with care.*

Offboard

Knowledge transfer, asset return and access removal — the same records, closed out with care.

Recommended version

STAGE 8 · How do we manage a smooth and responsible transition?

Offboard

Coordinate the employee's departure through handover, knowledge transfer, asset return, access removal and final exit activities — with every action tracked through to completion.

Also, can you change offboard to Offboarding

Ongoing People Management

Support, enable and empower — running throughout the journey, not tied to a single stage.

Employee Relations | Attendance | Leave | Wellbeing | Compensation & Benefits | Learning & Development | Performance | Engagement

My preferred final UI copy

ONGOING PEOPLE MANAGEMENT

The ongoing people processes that support employees throughout their working journey.

Employee Relations | Attendance | Leave | Wellbeing | Compensation & Benefits | Learning & Development | Performance | Career & Succession | Engagement.

Services Supporting Everything

The foundation that keeps every stage connected, compliant and proactive.

HR Action Centre | Workflows | Documents | Assets | Compliance | Analytics | Audit Trail

My strongest recommendation: Platform Foundations

then use:

PLATFORM FOUNDATIONS

The shared capabilities that keep every stage connected, automated, compliant and actionable.

HR Action Centre • Workflows & Approvals • Documents & E-signatures • Assets • Compliance • Analytics & Insights • Audit Trail.

What I think is missing or needs strengthening

There are **six things I would change**, rather than creating additional stages.

1. Make E-signature explicit. The employee lifecycle mentions documents, policy sign-off and compliance, but given that Motee has e-signature/DocuSign capability, it's undersold. The Journey Map currently says checks, documents and policy sign-off are part of the flow. I'd change the supporting service from **Documents** to **Documents & E-signatures**.

Then Stage 5 becomes visibly:

Generate Offer → Send for E-signature → Candidate Signs → Signed Offer Stored → References/Guarantor → Checks → Ready to Onboard

And Stage 6:

Contract Generated → E-signature → Signed Contract Stored → Employee Record

That gives you a tangible example of Motee's connected workflow.

2. Strengthen Stage 8 — Offboarding. Currently the Stage Guide summarises it primarily as knowledge transfer, asset return and access removal. I would show:

Leaving Notification → Offboarding Plan → Knowledge Transfer → Asset Return → Access Removal → Final Payroll/Documents → Exit Interview → Former Employee / Record Archived

That makes the final stage feel as complete as recruitment and onboarding.

3. Make retention more tangible in Stage 7. At present it includes assets, learning, performance and engagement. Because the stage is explicitly called **Develop, Perform & Retain**, I'd show some actual retention mechanisms:

Learning → Objectives → Probation → Performance → Career Development → Recognition → Engagement → Succession/Internal Mobility → Retention

Otherwise, the word **Retain** is stronger than the processes currently shown beneath it.

4. Add employee self-service as a cross-lifecycle capability. This is one of the notable omissions in the conceptual model. Employees should be able to update appropriate personal information, request leave, access documents, complete onboarding, acknowledge policies, complete surveys/training and potentially initiate appropriate requests.

I wouldn't make it Stage 9. I'd show **Employee & Manager Self-Service** as a capability supporting the lifecycle.

5. Make manager self-service equally visible. Managers are critical to your workflow: position requests, approvals, recruitment participation, onboarding, probation, performance, attendance, ER involvement and offboarding. The current model feels slightly HR-admin-centric.

Motee's proposition becomes stronger if you can say:

“Motee puts the right action with the right person—HR, employee or manager—while HR maintains oversight.”

I'd add “Former Employee / Record Archived” rather than simply “Complete & Archive.” This is clearer to an HR user and avoids suggesting that the person themselves is “archived.”
